

SOLAR DISTILLED DRINKING WATER

Now you can have drinking water, healthful and delicious.

Without having to carry home bottled water!

Purified by FREE solar energy in a Sunwater Solar™ Still.

The still is a shallow, insulated pan with a sloping glass cover. The pictured model, (SSS-8) is about 36" X 77" and purifies an average of about 2 gallons per day. This is normally enough for 3 to 4 people. A smaller size is available (SSS-5) that is adequate for 2 people.

ECONOMICAL: The payback in savings vs. bottled water is amazing, commonly in as little as one year!

PROVEN: Sunwater Solar™, founded by Horace McCracken, has developed the product, and sold stills every year since 1959.

PURE DELICIOUS WATER: Heat from the sun evaporates water in the tray. Moisture rises, condenses on the under side of the glass, and runs into a collection trough, and then into a bottle or reservoir. The condensed water, normally more pure than any bottled water, condenses in the presence of air, picking up oxygen and tasting "sweet" and "pure."

PRICES: SSS-5 (5 liters per day) \$595 SSS-8 (8 liters per day) \$750
F.O.B. Flagstaff, Arizona (freight to the Southwest only runs \$100-250)
